2011 Regen | The Diesel Stop

The regen pushes extra diesel fuel from the entire bank of cylinders, Not just #7 or #8. The fuel is used to increase the temperature to burn off soot into ash. The DPF has nothing to do with this process. The DPF is injected into another section of the exhaust to reduce the Nitrites in the exhaust. Two separate processes.

How to Perform a Parked Regen on a 2015 Ford F750

The 6.7L uses a second generation Regen process. Ford learned a lot from the 6.4L about soot particulates and has been able to use some passive regeneration procedures instead of using as many or as long of active regen processes.
