3.8 Slopes of Parallel and Perpendicular Lines Flashcards ...

Parallel lines and their slopes are easy. Since slope is a measure of the angle of a line from the horizontal, and since parallel lines must have the same angle, then parallel lines have the same slope — and lines with the same slope are parallel. Perpendicular lines are a bit more complicated.

Slope: Parallel & Perpendicular Lines | Purplemath

Slopes are very important tool to determine whether two lines perpendicular or not. If the product of slopes of two lines in the plane is -1 , then the lines are perpendicular and vice-versa. So, the slopes of perpendicular lines are opposite reciprocals. Practice Problem 1: Find the slope of the line through $(-1,6)$ and $(-10,15)$.
