PHY332 Atomic and Laser Physics A.M. FOX

The Laser Physics and Nonlinear Optics group (LPNO) explores the physics and technology of lasers, nonlinear optical processes and processing of optical information. Emphasis is put on nanophotonic approaches, to control the generation of light to its extremes and to explore novel ways for linear and nonlinear optical processing.

Institute of Photonics Advanced lasers We specialise in the physics and engineering of diode-pumped solid-state and semiconductor lasers. We put a particular emphasis on taking our novel laser concepts to a systems-ready level and working with industrial and academic partners on their practical implementation.

Laser light has extra-ordinary properties which are not present in the ordinary light sources like sun and incandescent lamp. The conventional light sources such as electric bulb or tube light does not emit highly directional and coherent light whereas lasers produce highly directional, monochromatic, coherent and polarized light beam.

Advanced lasers : laser physics and technology for applied ...

With its world-beating suite of laser equipment, developed to push back the frontiers of science, CALTA is advancing new applications of laser technology for applications such as advanced imaging. Working with our colleagues in STFC, the Central Laser Facility has developed unique technologies such as Adaptive Optics for laser systems.
