Description Logics (DL; Baader et al., 2003) is a popular knowledge representation formalism in the context of the Semantic Web. DL can be used for configuration knowledge representation, especially for the design of component type hierarchies (ontologies) and for coherence analysis.

Description Logics - an overview | ScienceDirect Topics

Introduction Description logics (DLs) are a family of knowledge representation languages that are widely used in ontological modelling. An important practical reason for this is that they provide one of the main underpinnings for the OWL Web Ontology Language as stan-dardised by the World Wide Web Consortium (W3C). However, DLs have been used in
