An Introduction to NURBS Page - NAR Associates

Alias NURBS allows the user to sculpt any shape, and is typically used for freeform, sculptural designs that can't be defined by dimensions or geometry. Primary Interaction: aesthetic, artistic, sculptural choices of shape and form.

An introduction to NURBS

Introduction to NURBS curves and surface modeling concepts in Rhino.

The latest from a computer graphics pioneer, An Introduction to NURBS is the ideal resource for anyone seeking a theoretical and practical understanding of these very important curves and surfaces. Beginning with Bézier curves, the book develops a lucid explanation of NURBS curves, then does the same for surfaces, consistently stressing important shape design properties and the capabilities of each curve and surface type.

Beginning with Bezier curves, the book develops a lucid explanation of NURBS curves, then does the same for surfaces, consistently stressing important shape design properties and the capabilities of each curve and surface type.

An Introduction to NURBS: With Historical Perspective by ...

So far, all has been theoretical, the best way to learn of course is to start creating forms directly into any NURBS modeling software. This was merely a brief introduction for modelers out there who still haven't incorporated NURBS modeling into their workflow, and to give a general idea on the whole process.

An introduction to NURBS - formpig

Non-uniform rational basis spline (NURBS) is a mathematical model commonly used in computer graphics for generating and representing curves and surfaces. It offers great flexibility and precision for handling both analytic (surfaces defined by common mathematical formulae) and modeled shapes. NURBS are commonly used in computer-aided design (CAD), manufacturing (CAM), and engineering (CAE) and are part of numerous industry wide standards, such as IGES, STEP, ACIS, and PHIGS. NURBS tools are also

NURBS Introduction

NURBS++ generates two types of standard curves automatically: a circle or a line. You can create a circle centered at $(0;0;0)$ of radius 1 and having a starting and ending angle of 0 and 2π respectively. Since a NURBS curve is rational, it can represent exactly a circle. Something that a B-Spline can't do. NurbsCurvef

Non-uniform rational B-spline - Wikipedia

Gathered here are a number of useful algorithms. The algorithms are implementations of the pseudocode in Appendix C of An Introduction to NURBS. Here the algorithms have been loosely translated into a `real' programming language, i.e., C. Hopefully, the availability of the algorithms in C will increase your understanding of the algorithms and hence of the underlying mathematics.
