For this reason, an experimental study has been realized. Also, modeling and analysis of the weld bead geometry in submerged arc welding by using adaptive neurofuzzy inference system have been performed. The major conclusions drawn from this study are the following. (i) ANN and ANFIS results are very close each other.

In this article, we have developed a full framework for the statistical analysis and modeling of the geometry and topology of plant roots. Central to the framework is an elastic curve-based tree-shape space and an elastic metric that enables us to find optimal correspondences between roots, even in the presence of large topological deformations.

The geometry and material properties of the model are given in Fig. 14. An analysis of the lower eigenfrequency spectrum is carried out to reveal the characteristics of different design shapes. Using the aforementioned concept the modeling effort is essentially reduced to setting-up an initial geometry patch and defining the various design ...

Geometry Modeling. Here, we investigate geometry modeling. Nowadays, computer-aided engineering (CAE) is an important section in engineering analysis. Before CAE, we should also know about computer-aided design (CAD) and geometry modeling. CAD tools make us capable of building geometry models of solid objects and empty spaces.

geometry model that is ready for energy analysis. The model set up time of a complex building geometry therefore could take as long as 100-150 person-hours in energy modeling practice and around 25% of the whole building energy modeling time depending on the complexity of the building geometry. Simplified geometry modeling is an effective means to

The stochastic geometry-based modeling and analysis of single-cluster wireless networks modeled as a binomial point process (BPP) [10, Def. 2.11] has been well studied [11]-[21]. In the BPP model, a fixed and finite number of nodes are distributed independently and uniformly inside a finite region.
