Although in the text, methods are separated into analytical methods and computational methods (based on thermodynamic modeling and molecular modeling and simulations), one should be aware that estimation of the drug-polymer miscibility and the solubility of the drug in the polymer is a complex problem, requiring multi-methodological approach.

The second sessions of the first two days of the workshop provided an overview of novel computational and analytical methods for fully characterizing process-structure-property relations in additive manufacturing (AM) processes for materials design, product design, part qualification, and discovery/innovation. This includes multiscale modeling, computational materials, modeling topology optimization, verification and validation methods, and uncertainty quantification for AM processes and AM ...
