Anatomy Unit 3 Skeletal System Packet Answers

SKELETAL SYSTEM The skeleton is constructed of two of the most supportive tissues found in the human body□cartilage and bone. Besides supporting and protecting the body as an internal framework, the skeleton provides a system of levers that the skeletal muscles use to move the body. In addition, the bones provide a stor-

Chapter 5 Skeletal System Study Guide Answers

What is the skeletal system made of? What does the skeletal system do? At the simplest level, the skeleton is the framework that provides structure to the rest of the body and facilitates movement. The skeletal system includes over 200 bones, cartilage, and ligaments. Read on to get 10 key facts about the human skeleton. 1. The Skeletal System Consists Of More Than Bones

Overview of Skeleton | Learn Skeleton Anatomy

Define bone, cartilage, and the skeletal system. List and describe the functions of the skeletal system. Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement.

6.1 The Functions of the Skeletal System - Anatomy and ...

The human skeletal system consists of all of the bones, cartilage, tendons, and ligaments in the body. Altogether, the skeleton makes up about 20 percent of a person's body weight. An adult's...
