*AP Statistics Review Probability - Northern Highlands*

For any two events (meaning disjoint or not disjoint), A and B, the probability of A or B is:  $P(A \cup B) = P(A) + P(B) - P(A \cap B)$  (ON GREEN SHEET)

*Probability | AP® Statistics | Math | Khan Academy*

The main AP Statistics probability topics are: interpreting probability, the law of large numbers concept, addition rule, multiplication rule, conditional probability and independence, discrete random variables and their probability distribution, simulation of random behavior and probability distributions, mean and standard deviation of a random variable, and linear transformation of a random variable.

Create a practice quiz out of these problems. Take your quiz under test-like conditions (no notes, no friends, no outside resources) and score yourself. Submit your work and your corrections as problem set #5. Tuesday 12/1: Probability Test #1 (Chapters 14-15) Chapter 16 - Probability Distributions and Random Variables Chapter 16 Video Notes

## *AP Statistics - Wikipedia*

AP Statistics COURSE OUTLINE By the end of the course, students should be able to compute descriptive statistics concerning populations, design studies or experiments to test hypotheses, perform tests of statistical significance on population data, and make inferences about population data.

## *Ap Statistics Test B Probability*

This unit on probability covers how to use simulations to calculate experimental probabilities and a variety of other methods (the addition rule, the multiplication rule, conditional probability) for calculating probability. Later, we'll use our understanding of probability to answer statistical questions.

## *Probability - AP Statistics - free-test-online.com*

The AP Statistics Exam will continue to have consistent question types, weighting, and scoring guidelines every year, so you and your students know what to expect on exam day. The overall format of the exam—including the weighting, timing, and number of questions in each exam section—won't change.

## *AP Statistics - Math with Ms. Mascher*

If a person is drunk, the test is 99% accurate but if a person is sober, the test is 98% accurate. 1% of all drivers are legally drunk. Of the individuals identified by the test as drunk, what % are actually sober? Offer your analysis to the sheriff along with recommendations for how he should proceed.
