~~API | Standards Addenda & Errata~~
674 Second Edition, October 1994 Scope
675-I-02/99 Does API 675 allow the use
of belt drive instead of a gear in hot,
sandy areas, i.e. The middle of the
Arabian Desert. In this location the
temperature rise to more than 55 C with
variations around 30 C between day and
night. I find no mention of belts Belt
drives are not addressed in API

~~Reciprocating Pumps - SPX FLOW~~
The pumps fully meet API 674 3rd
edition and ISO13710, and can handle
pressures up to 1,000 bar (14,500 psi) at
temperatures Figure between -40
(-104°F) and 200 liquid. This reduced
pressure causes bubbles to form, then
as the (392°F). espoke pumps can be
pressure of the liquid increases again,
the bubbles close to surface

meeting more stringent material specifications than API 675 STD. These pumps are realised with double metallic diaphragm only (AISI 316L) allowing internal PVS setting up to 150 bar g. These pumps are specifically designed for continuous dosing of extremely low flow rates with operating pressure up to 125 bar g (down to addition rates of 100 mil-

listed is API 676. Are the nozzle loads given in API 676 applicable to API 674? The nozzle loads given in API 676 are not applicable to pumps designed per API 674. The only reference within API 674 to API 676 is in Paragraph 1.1 SCOPE to indicate which standard applies to each type of pump.

~~API 674 Triplex plunger pumps~~

- Often, API Standards (American Petroleum Institute) cannot be matched with axial fans. Sleeve bearings cannot be mounted, due to the particular configuration of the fan and due to the fact that sleeve bearing allow a (small) assessment moving in vertical direction; a modification of the tip clearance has a big impact on pressure performance of
