The human operator of slow, multivariate processes has a task which involves continuous decision making in real time. This paper evaluates the techniques available for analysis of such situations and gives an example of an application in the glass industry.

[Chapter 9: Optimisation - Applied Process Control \[Book\]](#)

Bridging theory and practice, this book contains over 200 practical exercises and their solutions, to develop the problem-solving abilities of process engineers. The problems were developed by the author during his many years of teaching at university and are kept brief, taken from the fields of instrumentation, modelling, plant control, control strategy design and stability of control.
