the oral cavity, with or without a mandibulotomy. The decision to perform a mandibulotomy is generally based on the extent and location of the lesion. Smaller lesions can be removed without a mandibulotomy and will result in less morbidity.

A transnasal transclival approach with hypophysiopexy provided significant exposure of the upper clivus (84.4%). The transrostral approach was the first transnasal approach providing satisfactory access to the midclivus (66%); retrosigmoid and far-lateral approaches provided exposure of approximately one half of the midclivus.

Transnasal Endoscopic and Lateral Approaches to the Clivus ...

Surgical options to expose the clivus include lateral transcranial corridors, with retrosigmoid 7 and far-lateral 19 approaches being the most widely used, together with retrolabyrinthine and translabyrinthine approaches.

Transnasal Endoscopic and Lateral Approaches to the Clivus ...

Summary. The addition of the endoscope to endonasal approaches has allowed access rostrally to the entire clivus and laterally out to the cavernous sinus, petrous apex, and beyond. This requires a different understanding of the

The upper, middle, and lower clival approaches provide access to the anterior midline parts of the previously described upper, middle, and lower neurovascular complexes in the posterior fossa. The nasal and nasopharyngeal relationships important in expanding the transnasal approach to the borders of the clivus are reviewed.

Focal Transnasal Approach to the Upper, Middle, and Lower ...

The surgical approaches to the clivus are divided into three general groups: (1) anterior, (2) anterolateral, and (3) posterolateral. Anterior approaches are mainly used for extradural lesions that primarily involve the clivus and extend

House first described the middle cranial fossa approach in 1963 as a treatment for petrositis.^{56, 57, 58} Since that time, there have been modifications on the original procedure that extend or enlarge the surgical field.^{59, 60, 61, 62} This approach can also be extended to the petrous apex.^{24, 63} The extended middle cranial fossa approach, also
