What is Python?—ArcMap | Documentation

I have a Python script that starts with a Search Cursor that goes through a File Geodatabase and looks for a unique number and produces a graph and prints it out to a .PDF. The Script works out just fine. BUT - each time I run it - it seems to take longer and longer. The first few times - it produce...

Search Cursor in Python - GeoNet, The Esri Community

Calling close() more than once is allowed. Python automatically closes a file when the reference object of a file is reassigned to another file. It is a good practice to use the close() method to close a file. Syntax. Following is the syntax for close() method – fileObject.close() Parameters. NA. Return Value. This method does not return any ...

Python File close() Method - Tutorialspoint

Summary. Adds a custom informative message (severity of 0) to the messages of a script tool or Python toolbox tool. When a tool is run, arcpy is fully aware of the application it is called from. One major effect of this is that you can write messages in Python and your messages automatically appear on the tool dialog box, in the history, and the Python window.

AddMessage—ArcGIS Pro | Documentation

A feature service serves a collection of feature layers and tables, with the associated relationships among the entities. It is represented by arcpy.features.FeatureLayerCollection in the ArcGIS Python API. Instances of FeatureLayerCollection can be constructed using a feature service url, as shown below:
