Hyperlipidemia Update Alabama ACC Meeting, June 2016

190 mg/dL. Individuals 40 to 75 years of age with diabetes and LDL-C 70-189 mg/dL. For the primary prevention of ASCVD in individuals with diabetes (diabetes mellitus type-1 and type-2), estimated 10-year ASCVD risk can also be used to guide the intensity of statin therapy.

The Fourth IAS-OSLA Course on "Lipid Metabolism and ...

Dr. Ballantyne: The updated guidelines have created a new category of very high-risk people with an optional target of > 70 mg/dL. This is probably controversial. The ATP III guidelines recommended a target of < 100 mg/dL, but ATP II said ≤ 100 mg/dL, a subtle distinction, but implying that 100 mg/dL is good enough. Saying less than 100 mg/L, you are really leaving it open to clinical judgment.
