PROFINET RT allows applications to be created with cycle times > 10 ms.

PROFINET IRT
(isochronous real-time)

This isochronous real-time communication was developed especially for motion control applications. If specific hardware is used, cycle times < 1 ms and jitter times < 1 μ s can be achieved.

SPE differs from standard industrial Ethernet in that, instead of using four or eight total wires, it uses just two wires—a single twisted pair which provides communication across the common industrial Ethernet protocols (e.g., EtherNet/IP, Profinet, EtherCAT, etc.).

**Can IO-Link and SPE
Work Together? |**

Page 26/28
