this condition, the baby when born does not receive enough oxygen to the brain and other vital organs of the body. This may happen during birth or right after the birth of the baby.

What is Birth Asphyxia & How is it Treated?

Birth asphyxia can be caused by events in the antepartum, the intrapartum or the postpartum periods or combinations of all three. 15 A recent review suggests that asphyxia is probably primarily antepartum in 50% of cases, intrapartum in 40% and postpartum in the remaining 10% of cases. In developed countries where intrapartum complications are rare events, cases of perinatal asphyxia are more commonly related to antepartum causes or to the superimposition of intrapartum insults over an ...

Nursing Diagnosis Of A Birth Asphyxia

Serum calcium and phosphorus levels were measured at birth, 6 hours, 24 hours, and on 5th day of life in 35 neonates with birth asphyxia (one-minute Apgar score of 6 or less), and in 37 neonates without asphyxia (one-minute Apgar score of 7 or more). Infants were divided into three groups: FT-AGA (n=30, asphyxia=15), FT-IUGR (n=20, asphyxia=10) and PT-AGA (n=22, asphyxia=10).
