Cisco IOS Router Basic Configuration In this lesson, you will learn how to create a basic configuration for a Cisco IOS router. If you are completely new to the Cisco CLI, you might want to look at our Introduction to Cisco IOS CLI lesson first.

Cisco Guide to Harden Cisco IOS Devices - Cisco

Cisco NFP (Network Foundation Protection) is a framework which provides infrastructure protection based on IOS features designed specifically to protect the device control plane (services and routing protocols); the device data plane (malicious traffic) and the device management plane. This document briefly describes...

Cisco IOS Router Hardening Template - Cyber Security Memo

In recent weeks, Cisco has published several documents related to the Smart Install feature: one Talos blog about potential misuse of the feature if left enabled, and two Cisco Security Advisories that were included in the March 2018 release of the Cisco IOS and IOS XE Software Security Advisory Bundled Publication.

Cisco IOS Security Configuration Guide, Release 12.4 - Cisco

Receive ACLs are used in order to increase security on Cisco 12000 routers by the protection of the gigabit route processor (GRP) of the router from unnecessary and potentially nefarious traffic. Receive ACLs were added as a special waiver to the maintenance throttle for Cisco IOS Software Release 12.0.2152 and integrated into 12.0(22)S. Refer to GSR: Receive Access Control Lists for further information.
