The vertebral column, also known as the backbone or spine, is part of the axial skeleton. The vertebral column is the defining characteristic of a vertebrate in which the notochord (a flexible rod of uniform composition) found in all chordates has been replaced by a segmented series of bone: vertebrae separated by intervertebral discs.

## **Vertebral column - Wikipedia**

The spine is a segmental column of similar formed bones that constitutes the major subcranial part of the axial skeleton. Its individual elements are united by a series of intervertebral articulations
