Cognition is set to preserve the autonomy and continued existence of dynamic systems by neutralizing external and internal perturbations. On the dynamic approach, cognition is a relational, historical process: What matters is not which internal states agents have, but what agents do (De Jaegher and Di Paolo 2007; Thompson and Stapleton 2009).

decision making. Lately, neuroscientific research has focused on the relationship between social emotions and social cognition in predicting prosocial behaviors ...

On the interaction of social affect and cognition: empathy

...

Cognitive and emotional empathy are wonderful partners and can be a fantastic pair when practiced with balance. The ability to take someone's perspective and understand what it might be like to be them or the ability to meet someone where they are emotionally and have a shared emotional experience can be a game-changer for most any relationship dynamic.

By Hayashi Reiko 1996 Paperback

Empathy is the capacity to understand or feel what another person is experiencing from within their frame of reference, that is, the capacity to place oneself in another's position. Definitions of empathy encompass a broad range of emotional states. Types of empathy include cognitive empathy, emotional (or affective) empathy, and somatic empathy.

Empathy - Wikipedia

Empathy: Researchers suggest that people are more likely to engage in altruistic behavior when they feel empathy for the person who is in distress, a suggestion known as the empathy-altruism hypothesis. Researchers have found that children tend to become more altruistic as their sense of empathy develops. Helping relieve negative feelings: Other experts have proposed that altruistic acts help ...
