Working memory has been associated with activity in the dorsolateral prefrontal cortex, the parietal cortex, and sensory processing regions. Thus, the regions associated with working memory are similar to those associated with long-term memory (see Chapter 3), with the notable absence of medial temporal lobe regions such as the hippocampus.

Cognitive Neuroscience of Memory - Cambridge Core

Where To Download Cognitive Neuroscience Of Memory

Research on human memory is completely dependent on the methods that are employed in the field of cognitive neuroscience, and thus the future of memory research will follow the future of cognitive neuroscience. This final chapter focuses on the cognitive neuroscience techniques that have been employed in the past and the techniques that will be employed in the future.

The Future of Memory Research (Chapter 11) - Cognitive ...

Cognitive neuroscientists employ techniques that non-invasively track the functioning human brain. Section 1.2 details the fourteen different types of memory. In section 1.3, an overview of human brain anatomy is provided.

Types of Memory and Brain Regions of ... - Cambridge Core

A central observation is that memory, like other aspects of cognition and behaviour, poses problems of control.
