Enforcement as a Consideration in TSM Planning

So, this is all good news for TSM users to take advantage of the HADR feature. However, I have an interesting catch in using HADR with TSM while working with one customer recently. Database growth over time may cause TSM performance issues. Version 6.2 onwards TSM uses DB2 9.7 storage including reclaimable storage feature.

Considerations For Using Tsm In A San

Subsystem Considerations (TSM) ... Using instrumentation multiplexed across sites or instruments that access multiple sites simultaneously introduce the following synchronization challenges. Multiplexed sharing—You can use a multiplexer to connect a single instrument to multiple pins on the same DUT or on multiple DUTs.

open architecture, hardware, software and network protocols. With full consideration of user requirements, Wathdata TSM solution provides common interfaces and services, and facilitate users to quickly develop business and expand more value-added services.

SAP Backup using Tivoli Storage Manager

In order for TSM to correctly synchronize a given step and to ensure that a pre-step substep module does not unintentionally execute on blocked sites, use of the default module may be required. Accessing the Evaluations step property of a TSM Semiconductor Multi Test Step Type does not have an official API.

Upgrade TSM to V6

Pricing in TSM is based on a text field. You can enter a fixed gold value, or you can use the built in value sources in TSM. The value sources offer a much more flexible approach as they use the TSM database to get prices related to the specific items in your groups. Value Sources. Value sources are an incredibly important concept in TSM.

...

The current default setting for TSM is to use direct IO on storage pools (can be set in TSM's configuration file dsm.opt). Even though direct I/O reduces the CPU utilization on the TSM server, it generally leads to significant performance penalties [1] and longer elapsed times, since writes are synchronous and need to go directly to disk, instead of being copied to memory and flushed later.

OR connections in TSM: Let's change things a little: Now you want to use "50g" if at least one of the conditions is met and "250g" only if neither of the conditions is met. Everything stays exactly the same as in the example for the AND connection, the only thing we need to adjust is the min() function.
