Controlled and Novel Drug Delivery, 2008, N.K. Jain ...

Niosomes play an important role owing to their nonionic properties, in such drug delivery system. Design and development of novel drug delivery system (NDDS) has two prerequisites. First, it should deliver the drug in accordance with a predetermined rate and second it should release therapeutically effective amount of drug at the site of action.

ABSTRACT: Evolution of an existing drug molecule from a conventional form to a novel delivery system can significantly improve its performance in terms of patient compliance, safety and efficacy. In the form of a Novel Drug Delivery System an existing drug molecule can get a new life. An appropriately designed Novel Drug Delivery System can be a major advance for solving the problems related ...

A novel and alternative approach to controlled release ...

In the present contribution, the aim is to explore and establish a way in which 3D printing and gastro-retentive drug delivery systems (GRDDSs) are combined (focusing on inner structure innovation) to achieve extended and stable gastro-retention and controlled-release of drug. Three digital models diverse in construction were designed and substantiated by a pressure-assisted microsyringe ...

Structure-Based Gastro-Retentive and Controlled-Release ...

controlled drug delivery systems that give several benefits, like the drug being delivered at a programmed rate for exact period of time and at definite site, reduced frequency of administration, reduced side effects, and enhanced patient compliance, amplified safety margin of highly potent drugs, lowered healthcare costs, and enhanced therapy.
