A computer network is an interconnection of multiple devices that send and receive data to each other using network protocols. Devices in a network typically include computers, mobile devices, hard drives and other storage media, peripheral devices like printers and scanners, and the routers, switches, bridges, and hubs that tie them all together.

Networking Online Courses - Learn Computer Networks | Coursera

Data communications (DC) is the process of using computing and communication technologies to transfer data from one place to another, or between participating parties. DC enables the movement of electronic or digital data between two or more network nodes, regardless of geographical location, technological medium or data contents.
