Data Push Apps with HTML5 SSE: Pragmatic Solutions For...

Data Push Server-Sent Events (SSE) is an HTML5 technology that allows the server to push fresh data to clients (commonly called data push). So, just what is data push, and how does it differ from anything else you may have used? Let me answer that by first saying what it is not.

Amazon.com: Customer reviews: Data Push Apps with HTML5 ...

-Great for servers to push to clients •WebRTC -Enables direct, peer-to-peer connections over the web •No middle-man greatly reduces latency •Requires a TURN server to get clients connected directly -Great for •Streaming audio/video •Communicating arbitrary data (think games) 29

Make sure your website or web application users get content updates right now with minimal latency. This concise guide shows you how to push new data from the server to clients with HTML5 Server-Sent Events (SSE), an exceptional technology that doesn't require constant polling or user interaction.

Building Real-time Data in Web Applications with Node

The Push API gives web applications the ability to receive messages pushed to them from a server, whether or not the web app is in the foreground, or even currently loaded, on a user agent. This lets developers deliver asynchronous notifications and updates to users that opt in, resulting in better engagement with timely new content.
