However, abnormal lab results are not a sure sign of cancer. Learn more about laboratory tests and how they are used to diagnose cancer. Some lab tests involve testing blood or tissue samples for tumor markers. Tumor markers are substances that are produced by cancer cells or by other cells of the body in response to cancer. Most tumor markers

## Detecting Cancer

### Cancer Quintet

Cancer Genetics

Overview for a list of familial cancer susceptibility syndromes. Most of these are caused by harmful variants that are inherited in an autosomal dominant fashion—that is, a single altered copy of the gene inherited from one parent is enough to increase a person's chance of developing cancer.
