(Family) Darner Dragonflies - Montana Field Guide

Dragonfly and damselfly larvae use gills to breathe under water and feed on aquatic invertebrates, tadpoles and even small fish. With an adult wingspan of up to 170 mm, Queensland's giant petaltail is the largest of Australia's species, and one of the largest in the world.

---

Washington Dragonflies and Damselflies

The dragonfly is a carefree insect that symbolizes free spirit, swiftness, and activity. The fact that the adult dragonfly breaks free from its larval stage (in which it remains for a major part of its life), is a symbol for freedom. The Native Americans considered the dragonfly as a symbol of swiftness and activity. Philosophy of Life and Death
