Skills in Biology (3rd edition)

All aspects of biological diversification ultimately trace to evolutionary modifications at the cellular level. This central role of cells frames the basic questions as to how cells work and how cells come to be the way they are. Although these two lines of inquiry lie respectively within the traditional provenance of cell biology and evolutionary biology, a comprehensive synthesis of ...

Evolutionary cell biology: Two origins, one objective | PNAS

RNA parts from directed selection and evolution. The ability to generate novel RNAs with virtually any specific predetermined phenotype, using directed evolution and in vitro selection, has been instrumental in RNA nano-technology and RNA synthetic biology [83,84]. In this regard, SELEX (systematic evolution of ligands by exponential enrichment) has become the strategy of

RNA modularity for synthetic biology

Evolution of Modularity The exact evolutionary origins of biological modularity has been debated since the 1990s. In the mid 1990s, Günter Wagner argued that modularity could have arisen and been maintained through the interaction of four evolutionary modes of action:
