the study of evolution from a genetic point of view (it is the study of microevolution)

Microevolution. —a change in the collective genetic material of a population. Population. —members of the same species that can interbreed. It is the smallest unit in which evolution occurs.

Genes and Variation

Darwin's original ideas
can now be under-
stood in genetic terms.

Beginning with
variation, we now know
that traits are con-
trolled by genes and
that many genes have
at least two forms, or
alleles. We also know

that individuals of all species are heterozygous for many genes.
