The sensor also opens/closes a set of four switches that are monitored by the PCM to determine the position of the manual lever (P, R, N, (D), 2, 1). The 4x4 low (4x4L) range switch is located on the transfer case cover. It provides an indication of when the 4x4 transfer case gear system is in the low range.

How to Diagnose a Ford Expedition Transmission Problem

The transmission range sensor (TRS), sometimes called the transmission position sensor, tells the powertrain control module (PCM) the position of the gear shifter so it can start the vehicle or enable the appropriate gear. The TRS can wear out over time. This can cause your vehicle to not start or start in the wrong gear.
