The coming tectonic shifts. The following are the tectonic shifts that I believe will fundamentally alter how companies structure jobs and engage employees over the next five to 10 years. These are not the only major changes we will see. But I believe they reflect deep seated shifts in how people and societies view the nature of work and labor. 1.

Society Is Changing What the Future of Work Will Be Like ...

Tectonic plates, the massive slabs of Earth's lithosphere that help define our continents and ocean, are constantly on the move. Plate tectonics is driven by a variety of forces: dynamic movement in the mantle, dense oceanic crust interacting with the ductile asthenosphere, even the rotation of the planet.

Earth's Shifting Tectonic Plates | National Geographic Society

Tectonic shifts in society and business occur when unexpected events force widespread experimentation around a new idea. During World War II, for instance, when American men went off to war, women proved that they could do “men’s” work — and do it well. Women never looked back after that.
