Release

(ACR) valves reduce the strain of starting your high performance motor by reducing cylinder compression - automatically! The engine is easier to turn over resulting in less wear on your starter and battery. After start, the ACR valves close to restore full compression.

INSTRUCTIONS -

Harley-Davidson

Personally I like the manual compression release because if the bike pops and stalls as some singles do, the manual release can be held open and the engine kicked through several times, key off, to clean out the cylinder, then start it. Can't do that with the automatic releases.
