Journal Impact Factor (IF) is a measure reflecting the average number of citations to articles published in science and social science journals. It is frequently used as a proxy for the relative importance of a journal within its field, with journals with higher impact factors deemed to be more important than those with lower ones. via Wikipedia.

[Journal Impact Factors | Annual Reviews](#)

Coercive citation is a practice in which an editor forces an author to add extraneous citations to an article before the journal will agree to publish it, in order to inflate the journal's impact factor. A survey published in 2012 indicates that coercive citation has been experienced by one in five researchers working in economics, sociology, psychology, and multiple business disciplines, and it is more common in business and in journals with a lower impact factor.

[2012 Impact Factor List](#)

Produced annually, Impact Factors are calculated by dividing the number of citations in a year, by the number of citeable articles published in the preceding two years. The 5-Year Impact Factor is the average number of times articles from a journal published in the past five years have been cited in the Journal Citation Reports year. For ...

The Impact Factor helps evaluate a journal's impact compared to others in the same field by measuring the frequency with which recent articles in a journal have been cited in a particular year: the 2012 Impact Factor takes into account citations in 2012 to papers published in 2010 and 2011.

[Impact factor - Wikipedia](#)

Specifically, the impact factor for year y is calculated by dividing (a) the total number of citations during year y to articles that appeared in the journal in years y-1 and y-2 by (b) the total number of articles published in the journal in years y-1 and y-2. In the table above, values are given for the years y from 1995 to 2012.
