~~Implementation of Intelligent
Automation — A Prudent Playbook~~
Implementation is the carrying out,
execution, or practice of a plan, a
method, or any design, idea, model,
specification, standard or policy for
doing something. As such,
implementation is the action that must
follow any preliminary thinking in order
for something to actually happen.

This chapter describes the tasks involved in the implementation and production phases of an automation project. If you envision an extensive automation project, divide it into stages as described in Chapter 4, Designing an Automation Project. You will then have an implementation phase and a production phase for each stage of automation.
