Relationship between corals and fishes on the Great ...

Corals are animals that “take root” on the ocean floor and can live in shallow waters or the deepest ocean canyons. Corals create underwater habitats and support more species than any other marine environment—they rival rainforests in their biodiversity. We work to better understand and conserve coral species and coral reef habitats.

Interrelationships between corals and fisheries (eBook ...

Coral reefs are underwater structures built by tiny sea animals. Hard corals, which have a stone-like skeleton, grow into reefs on the edges of tropical islands and continents. Their beautiful shapes and colors are a magnet for divers, but they also provide an excellent home for thousands of marine creatures, including fish we love to eat.

Cold-water corals landed by bottom longline fisheries in ...

Coral reef diversity Because of the diversity of life found in the habitats created by corals, reefs are often called the "rainforests of the sea." About 25% of the ocean's fish depend on healthy coral reefs. Fishes and other organisms shelter, find food, reproduce, and rear their young in the many nooks and crannies formed by corals.

economic value of the upland activities may be such that a collaborative approach to encourage agriculture and industry to act in the interests of a distant coastal ocean will achieve very little change in behavior.

Addressing the global decline in coral reefs and ...

A number of studies have shown positive relationships between fish community structure and habitat diversity (e.g. [5,7,8]), coral diversity and coral species richness (e.g. [5,7,8]), while others have not found these relationships (e.g. [11,12,32]). The conflicting results may stem from the use of different habitat diversity measures.
