Limestone caves in the tropics are typically associated with a more diverse assemblage of vertebrates than are caves in temperate regions. Chapman [87] for example, has reported 37 species from the caves of Gunung Mulu National Park, Sarawak, whereas Bailey [43] lists only 13 for the equally cavernicolous Guadeloupe Mountains National Park, New Mexico, USA.

"Jamaican Cave Vertebrates" by Donald A. McFarlane

The deepest is Smokey Hole, at 195 meters, explored by the Jamaican Caves Organisation (JCO) in 2006. The deepest underground river, 187 meters below the surface, is at Morgans Pond Hole. The largest chamber, 200 meters long, 100 meters wide, and 80 meters high, is at Dunn's Hole. Research.
