(PDF) Law and the Semantic Web: Legal Ontologies ...

This book presents 15 thoroughly refereed revised papers on topics relevant for law and the Semantic Web. The book is structured into three parts. Part I sets the scene by introducing the relevant concepts, describing some of the users (legal professionals), and putting into historical context how legal professionals think about the use and application of law.

Metcalfe's law. In Web 2.0 applications, much of that effect is delivered through social linkages realized via social networks online. Unfortunately, the associated semantics for Web 2.0 applications, delivered through tagging, is generally minimally hierarchical and sparsely linked. The Semantic Web suffers from the opposite problem.

Note: this web site will take you to other resources and is well worth the visit. If your head isn't hurting yet with too much of these technical details, I would also like to introduce you to a book reference – Law and The Semantic Web (Benjamins et al. eds; Springer, Berlin,

N.Y.: 2005). In this book, the editors assemble a number of primary research papers dealing with legal ontologies, methodologies, legal information retrieval, and applications.

Law and the Semantic Web – Slaw

Metcalfe's law. 1. Introduction. In talking about the Web, whether the original model, the so-called "Web 2.0", or the emerging Semantic Web (aka Web 3.0), one of the most important things to keep in mind is the network effect. The power of the Web emerges through the link space realized between Web pages.

Semantic Web for the Legal Domain: The next step

Semantic Web, extension of the World Wide Web (WWW) in which data are given meaning to enable computers to look up and "reason" in response to user searches. One of the strongest proponents of the Semantic Web is Sir Tim Berners-Lee, the British inventor of the WWW and the director of the World Wide Web Consortium (W3C), which oversees standards for the project.

Legal Ontologies Spin a Semantic Web By Dr. Adam Z. Wyner Special to Law.com June 8, 2009 "The Semantic Web, an extension of the current www, promises to make documents meaningful to people and computers by changing how legal knowledge is represented and managed. Dr. Adam Z. Wyner explains how legal ontologies will help complete the new Web's design." From the article:

semantic web | Legal Research Plus

The Semantic Web is an extension of the World Wide Web through standards set by the World Wide Web Consortium (W3C). The goal of the Semantic Web is to make Internet data machine-readable. To enable the encoding of semantics with the data, technologies such as Resource Description Framework (RDF) and Web Ontology Language (OWL) are used. These technologies are used to formally represent metadata.
