Marine propulsion is the mechanism or system used to generate thrust to move a ship or boat across water. While paddles and sails are still used on some smaller boats, most modern ships are propelled by mechanical systems consisting of an electric motor or engine turning a propeller, or less frequently, in pump-jets, an impeller. Marine engineering is the discipline concerned with the ...

When you're buying a new boat, or repowering an existing boat, you may need to decide whether gasoline or diesel is right for your needs. If you're not as familiar with diesels as you are with gas engines, and still think of diesels as smoke-belchers, just be aware that there's been a lot going on over the past several years when it comes to diesel engine technology for marine applications.
