The higher the ISO, the faster the shutter speed, and the brighter the photo. The lower the ISO, the slower the shutter speed, and thus the darker the photo. The way to imagine ISO: imagine the sensitivity of your eyes to ambient light.

## **The Ultimate Beginner’s Guide to Mastering Photography ...**

A photograph's exposure determines how light or dark an image will appear when it's been captured by your camera. Believe it or not, this is determined by just three camera settings: aperture, ISO and shutter speed (the "exposure triangle"). Mastering their use is an essential part of developing an intuition for photography.

## **Camera Exposure: Aperture, ISO & Shutter Speed**

If your shutter speed is long enough, which might be the case if you are shooting at night, you are all set. If you need to slow down your shutter speed, you need to make offsetting changes to your ISO and Aperture. First put the ISO as low as possible. On most cameras that is ISO 100.
