As the engine approaches the shift point (start the downshift approximately 50 -100 RPM above the shift point), depress the clutch and move the lever to neutral. Engage the clutch and raise the engine RPM until the engine and driveline speeds are equal (normally, governed speed). Depress the clutch, then shift into the next lower gear.

I have an issue with a 2001 Freightliner with a 10 speed Meritor transmission. When going from 5th to 6th gear, flipping the range selector to high, it will grind for a second before shifting in to 6th gear. It does it every time going from low to high but never from high to low. It shifts into and out of each gear very smoothly.
