Edit: This was not the exercise I found in my edition of 'Think Python', so I've added my answer in case anyone else is curious: Use get to write histogram more concisely. You should be able to eliminate the if statement. def histogram (s): d = dict for c in s: d [c] = d. get (c, 0) + 1 return d.

Think Python/Answers - Wikibooks, open books for an open world
The input function in python2.x will try and evaluate the string you pass it as code. This can be considered undesirable or dangerous, and it is usually recommended to use raw_input instead.. That being said, raw_input will give you back a string. You will want to convert it to an int to compare to other ints:
