Microsoft announced Azure Sphere OS, its first operating system based on Linux to improve the security of the Internet of Things. It is the first time in its 43 years of existence that Microsoft announces something similar, the first time in its history that a custom Linux kernel will be distributed.

Linux vs. Unix: What's the difference? | Opensource.com

MNOS (meaning "MobilNaya Operatsionnaya Sistema" (Мобильная Операционная Система, МНОС), or "Portable Operating System") was a Unix-like operating system developed in the Soviet Union. Overview. The system was derived from Version 6 Unix and consequently heavily modified to incorporate many features of BSD Unix.

MNOS (operating system) - Wikipedia

The difference between UNIX and "Unix-like" operating systems, mostly refers to the fact that some operating systems, which try to mimic the behaviour of UNIX and stay API compatible with it, did not actually pay for the right to use the term UNIX, either because they don't have the money to or do not care about being able to call themselves UNIX.

Linux vs Unix - Difference and Comparison | Diffs

Linux is a free and open source operating system based on Unix standards. It provides programming interface as well as user interface compatible with Unix based systems and provides large variety applications.
