Panspermia (from Ancient Greek πᾶν (pan) 'all', and σπέρμα (sperma) 'seed') is the hypothesis that life exists throughout the Universe, distributed by space dust, meteoroids, asteroids, comets, planetoids, and also by spacecraft carrying unintended contamination by microorganisms. Distribution may have occurred spanning galaxies, and so may not be restricted to the limited scale of ...

Organic Matter in the Universe. (eBook, 2011) [WorldCat.org]

Organic matter has a slower reaction rate than inorganic matter. The slower reaction rate allows for the formation of more complex products during the reaction. When submerged in an aqueous solution, inorganic compounds are better conductors of heat and electricity than organic compounds. Organic matter has lower melting and boiling points than ...

Wiley-VCH 2012 253 pages \$135.00 Hardcover QB790 Kwok (U. of Hong Kong) reviews the growing evidence that organic matter is commonly present throughout the universe, and asks whether organic matter in diverse locations is related or has a common origin.

Science breakthrough: Complex slime organisms could ...

The terms "organic" and "inorganic," as applied to the various kinds of matter of which the universe is composed, had, to begin with, a very definite signification; the latter being applied to all those forms of matter which exist independently of the operation of living beings, whilst all kinds of matter produced by the vital chemistry of living beings were grouped together under the former ...
