xtable function | R Documentation

We would like to show you a description here but the site won't allow us.

Package Xtable R

Details. This function extracts tabular information from x and returns an object of class "xtable".The nature of the table generated depends on the class of x.For example, aov objects produce ANOVA tables while data.frame objects produce a table of the entire data frame. One can optionally provide a caption or label (called an anchor in HTML), as well as formatting specifications.
