api - SWIFT message parsing for .NET - Stack Overflow

MT Parser (SWIFT to Java) The parser provides functionality to convert SWIFT messages FIN text into the Java message model. By doing this, you can work with SWIFT messages focusing on the data and not having to deal with low level syntax details. The parser always performs a best effort heuristic to parse the message even if it is not well formed. All the information is read and put in a suitable object of the message model regardless of the message being SWIFT compliant.
