This is a revision of the previous joint Policy Statement titled "Guidelines for Care of Children in the Emergency Department." Children have unique physical and psychosocial needs that are heightened in the setting of serious or life-threatening emergencies. The majority of children who are ill and injured are brought to community hospital emergency departments (EDs) by virtue of proximity.

Emergency department (ED) health care professionals often care for patients with previously diagnosed psychiatric illnesses who are ill, injured, or having a behavioral crisis. In addition, ED personnel encounter children with psychiatric illnesses who may not present to the ED with overt mental health symptoms. Staff education and training regarding identification and management of pediatric ...

Changes in Pediatric Emergency Care The field of pediatric emergency medicine continues to grow and flourish, expanding to incorporate advances in technology. Similarly, over the life of the journal, we transitioned our publication frequency from quarterly to bimonthly and then to monthly, with a concomitant increase in the annual number of pages.

## **Pediatric Emergency Care**

Pediatric Emergency Care has published a new study external icon that describes factors related to whether U.S. emergency departments (EDs) have policies in place to care for children with mental health and social concerns. As a result of this study, scientists from the Centers for Disease Control and Prevention (CDC) and partner organizations found that less than half (46.2%) of EDs had such ...

“Studies have shown that emergencies are common in primary care practices that provide care to children. In 1 study, the authors surveyed 52 pediatric offices and found that these practices saw a median of 24 emergencies per year. Most of the offices (82%) reported that they encountered, on average, at least 1 emergency per month. In another ...
