Animal Adaptations. An adaptation is something about an animal that makes it possible for it to live in a particular place and in a particular way. It may be a physical adaptation, like the size or shape of the animal's body, or the way in which its body works. Or it may be the way the animal behaves.

...

Animal Adaptations - UEN

Each group of animals has its own general adaptations. These groups are: fish, amphibians, reptiles, birds, and mammals. Some of these adaptations make it easy to identify which group an animal belongs to. A good example of an animal adaptation is the way in which an animal moves from one place to another. Animals have evolved their adaptations.

ANIMAL ADAPTATIONS - USI

The word adaptation does not stem from its current usage in evolutionary biology but rather dates back to the early 17th century, when it indicated a relation between design and function or how something fits into something else. In biology this general idea has been coopted so that adaptation has three meanings. First, in a physiological sense, an animal or plant can adapt by adjusting to its
