Summary From 2000 to 2009 we carried out 10 scientific missions to Central-Southern Dhofar with the aim of collecting plants. We explored several habitats, such as littorals and seashores, coastal plains and many wadis ending in the Arabian sea (from Rackhyt, Al Mughsayl, Salalah, Khor Rori, Mirbat, Hadbin up to Hasik). We paid particular attention to the floristic exploration of the monsoon ...

Within the slopes and valleys of the southern mountains of Oman are an extraordinary variety of flora. The plants in Dhofar inhabit an environment that can change from wet cloud soaked biome to bone-dry desert in the period of a few days or meters. Grass dominates the mountain upper plateau while the sea-facing slopes are have Anogeissus dhofarica as their dominant plant.

*Kleinia - Wikipedia*

The hilly ranges at Jebel Akdhar and Dhofar are rich with remarkable flora and fauna and comprise of migratory birds and valuable medicinal plants. The Jebel Akdhar area in Oman, from which medicinal plant data was gathered, is situated at latitude 23.3 o 19.8' N and longitude 57.88 ° 52.8' E and 2000 m above sea level.
