*Injection Molding Basics: An Introduction to Designing ...*

Everyone wants to save money on manufactured parts. It sounds simple, but one of the easiest ways to reduce price-per-piece cost in injection molding is by increasing part quantity.

*Injection Molding Best Purging Procedures | ASACLEAN*

Injection molding is the most commonly used manufacturing process for the fabrication of plastic parts. A wide variety of products are manufactured using injection molding, which vary greatly in their size, complexity, and application.

Polyvinyl Chloride (PVC or Vinyl) is an economical and versatile thermoplastic polymer widely used in building and construction industry to produce door and window profiles, pipes (drinking and wastewater), wire and cable insulation, medical devices etc.

I totally believe in ASACLEAN products. We have used it for many years. We purge out a 180-oz. barrel, going from black nylon, glass-filled, to clear polypropylene in just a matter of a couple of purges.

Rotational molding permits produc-tion of a countless number of fully or partially closed items. Design versatility of rotationally molded pieces is almost unlimited.

Purging Procedures For Injection Molding. Purging a plastic injection molding machine with resin or regrind for color changes or carbon removal often leads to costly waste and lost production time.

Adding Draft and Radii to Injection Molding Designs. Applying draft and radii to a part is vital to a properly designed injection-molded part. Draft helps a part release from a mold with less drag on the part's surface since the material shrinks onto the mold core.

While there are many plastic moulding processes and techniques, this website discusses only the techniques of rotational moulding, injection moulding, blow moulding, and compression moulding.However, the following article entitled "Your Guide to Plastic Molding" is a good overview for the various plastic moulding processes.
