Your backup application should use its backup catalogs to identify the last unencrypted version of each file and automatically restore those versions. If those backups are to tape, it will take a while to work through each tape. If the backups are to disk, it should take less time to recover.

How to protect backups from ... - Search Data Backup

Should you have neither feature set in your current product, my recommendation for how to protect backup from ransomware involves two parts. First, focus on your layered defense strategy to keep as much malware from getting in as possible. This should include domain name system protection, email and web scanning, endpoint protection and antivirus. Second, for critical systems that absolutely need to be recoverable, I'd suggest identifying the file locations where malware attempts to install ...
