Protective Relays Application Guide Gec Measurements

In electrical engineering, a protective
relay is a relay device designed to trip a
circuit breaker when a fault is detected.:
4 The first protective relays were
electromagnetic devices, relying on coils
operating on moving parts to provide
detection of abnormal operating
conditions such as over-current, over-

that is independent of current spikes
and momentary overloads. The AF0500
relay can detect an arcing condition and
send a trip signal to a circuit breaker in
less than 1 ms. This response time is
much faster than standard current-
based protection, which means using an
arc-flash relay will lower the incident
energy or arc-flash hazard in most
cases.

Application Guide for English Electric
Relays English Electric had virtual
monopoly in the electricl protective
relays in India. Even now, in these times
of digital architecture and computer
communication with relays, you'll be
surprised to find so many of these old
electromechanical relays happily in
service.
